Nursing Home Cost Report (RHCF)

Introduction

The Nursing Home Cost Report (RHCF) is a uniform report completed by New York nursing homes to report income, expenses, assets, liabilities, and statistics to the Department of Health (DOH). Under DOH regulations, (Part 86-2.2), nursing homes are required to file financial and statistical data with DOH annually. The data filed is part of the cost report and is received electronically through a secured network. This data is used to develop Medicaid rates, assist in the formulation of reimbursement methodologies, and analyze trends.

Data Collection

All RHCF cost reports are certified by a CPA prior to submission by the Operator (signatory) of the nursing facility. The data for the RHCFs 2009 and forward will be posted to this website, once properly certified by a CPA and submitted by the Operator.

Limitation

The RHCF is a comprehensive compilation of schedules that have been modified over time that users should consider when using the RHCF dataset. It is possible that data is updated after posting on this website; therefore, the data could become obsolete. The completed RHCF is submitted by the Operator and is certified by a Certified Public Accounting Firm annually.
